Eco-Expert

Katie Swanson – Stewardship Coordinator of the Mission-Aransas National Estuarine Research Reserve at the University of Texas Marine Science Institute

Walk along any beach near Corpus Christi and you will surely find many interesting and delightful things, sand dollar fragments, sea shells, etc. But, we all know you will also find lots and lots of... trash. Marine debris is any man-made object that has made it into the marine environment, either intentionally or accidentally. All different kinds of marine debris can be found along the Texas Coast. In this presentation, potential sources and impacts of marine debris will be discussed, as well as some results of an ongoing NOAA Texas Marine Debris Monitoring Project.

- Class size limited to 24.
- This program is FREE of charge and open to individuals and families.
- Walk-ins are welcome on a first come first served basis.
- This program is for individuals and families with children ages 12 and older.
- To reserve a space, please register at <http://register.ccparkandrec.com>.
